DOING THINGS BY WHOLESALE

Easy to See Many Advantages in New Methods Rapidly Being Brought to Perfection.

Heretofore we have bought medical service at retail. Now Glasgow is trying out a plan to sell medical service wholesale.

What Glasgow is striving to do is this: Divide the city in districts and provide free dispensaries and free doctors to all who need medical attention. It is claimed that such a scheme will reduce the death rate, because many poor people now skip their families in the matter of health precautions.

And the doctors like it, also. They work fewer hours and a standard pay is guaranteed.

Withal, the Glasgow plan of wholesale doctoring is said to be cheaper than our old-fashioned retail method. "Glasgow" writes in the Philadelphia Press.

American cities have made half a step toward such doctoring of the people in wholesale lots.

We have boards of health and health bureaus. They administer in a general way and they administer in wholesale doses.

An order goes out and it goes for all the people. It is economical and wise, as every one knows, during such an epidemic as the "flu" was last year.

Doctoring by wholesale saved millions of lives in that calamity.

Uncle Sam did the insuring of his own soldiers by wholesale in the last war.

Public schools supply education in wholesale quantities.

Our spiritual wants are supplied in a fashion wholesale through the churches.

No wholesale doctoring is only another day's march in the general direction of a socialistic empire.

MAKES NEW USE OF ECHOES

Inventor's Idea May Do Away With the Old Practice Known as "Heaving the Lead."

An inventor in Oakland, Cal., has found a new and practical use for echoes, and as a result the time may come when the practice of "heaving the lead" at sea will be known only in historical novels and old maritime history. The marimeter, as the new device is called, sends a sound from the keel of the ship to the bottom of the sea; the sound comes back as an echo, and the journey, automatically recorded on a dial, is translated into terms of length. The report shows the depth of water between keel and bottom, calculated from the known speed of the sound-wave in salt water, and the knowledge may be acquired at the rate of four soundings a minute, which is very much faster than by the older methods. The marimeter, to be sure, has only recently gone to sea. If indeed the steamer Governor, which will carry the first of them, has yet left dry dock in Seattle, Wash. But the instrument promises to add materially to the security of ocean traffic.

Science and Soap Bubbles.

Sir James Dewar, the English professor of chemistry, who has made soap bubbles which he kept intact for more than a year, says that when a soap bubble becomes very old, say in three or four days, it offers the only possible example of the molecule visible to the naked eye. In the soap bubble ordinarily there are about 100 layers of molecules, but scientific treatment has produced black spots in which there is only a single layer, so thin that Sir James estimates that it would take one and one-third million like it superimposed to make an inch.

Insures Crusoe's Musket.

The musket said to have been given to Alexander Selkirk when he was put ashore on the island of Juan Fernandez, 400 miles off the Chilean coast, has been going the rounds of British museums.

It was Selkirk's adventures upon which was based De Foë's famous story, "Robinson Crusoe." The musket is inscribed with the name of "A. Selkirk Large, 1771." It was purchased by Randolph Berens for \$30.25, but the owner has insured it for \$10,000.

Selkirk owned a tavern near Clapham, England, but died in 1723 at sea as a lieutenant aboard a naval vessel.

Mennonites Make Trouble.

The Mennonites in Canada are fighting the compulsory school law, insisting on sending their children to their own parochial schools. As a result, a little schoolmaster has sat at her desk in a schoolroom in central Saskatchewan daily since September 1, waiting in vain for pupils to come to occupy the empty benches.

Put Over.

"The gentleman disclaims any knowledge of a huge slush fund spent in his behalf."
"And you will observe he does so without rancor."
"Quite so. I also observe that the gentleman was elected, which may explain the absence of rancor."

Salt in Holland.

Holland has begun to produce salt from wells drilled experimentally in two provinces and may be able to obtain enough for all of its needs.

New Metal Ladle Invented.

For workers with melted metals a ladle has been invented that pours from the bottom, leaving the dross and impurities behind.

Utilizing Paper.

Although there is a great shortage of paper, it is unlikely that many of us have carried economy to the extent indicated in a letter received by a school teacher the other day. "Dear Sir," it ran, "Please excuse Tom being late, but our gas leaks, so we couldn't cook any breakfast. Please send a man to put it right. P. S.—Please let him take this note on to the plumber."

Send the children to see "Polly" in the afternoon—11c—4c—2c.

FINISHING FACTS

The finish of a varnishing job depends very largely upon the quality of the varnish

Berry Brothers Varnishes

are recognized the world over as the standard of quality. They are durable and easily applied, the colors are brought out and maintained. Refinish your car with BERRY BROS. and the job will be right.
